Addendum 1 – Procedural Modifications

The following changes are being requested for our IRB submission.

Modification to Item 1. We are adding additional hypotheses.

Hypothesis 4. People assigned 'personal goals' that go unmet are less likely to overstate their performance than people assigned 'mere goals' (H4a) or 'reward goals' (H4b).

Hypothesis 5. There is a relationship between proximity to goal attainment and overstating behavior that is moderated by goal commitment. Specifically, individuals overstate their performance the most when they (i) fall just shy of meeting an assigned goal to which they are (ii) strongly committed. Conversely, there is less overstating when goal commitment is low or performance falls further away from the goal.

These hypotheses were added to more strongly test the notion that goal setting causes unethical behavior.

Modification to ITEM 2 on the application form: Addition of a "follow up" survey. See next page.

The purposes of this survey are to:

1. Determine whether our goal manipulations are effective (e.g., people assigned a 'do your best' goal should pick all As while people assigned a specific goal should pick all Bs; people who pick B should also go on to note the specific number of valid words that we assigned to them) (item 1 and 2)
2. Whether individuals were committed to the goal that we assigned. (items 2 and 3)
3. Determine whether people feel good or bad hitting a target in the productivity report. (item 4.1-4.3)
4. Determine whether overstating one's performance on the anagram task is considered a dishonest behavior. (items 4.4-4.6)
5. Assess whether people paid full attention. (items 4.7)
6. Ask directly whether we participants think we should use or not use their data. (item 5)
7. Determine whether participants guess or know what our study is about. No consequences will arise for those who 'guess' or learn of our study (item 6)
8. Determine if our participant ID generator is working. We should get the same ID number twice.
    a. *Note 1*: In the main study, we will only gather the participant ID information once.

Please note that we may cut items from the follow-up survey for certain participants. The reason for this is because we do not know if our manipulation checks will interfere with the phenomenon that we are studying. Our manipulation checks are merely to see if our goal manipulations are working as intended. If we find evidence supporting this notion in our pilot study, then we may not include these measures in our main study.

FOLLOW-UP SURVEY

Please read and answer the questions below. Note that we ask multiple related questions to make sure that our measurements are working as intended.

1. Below are pairs of statements (1-3). Please select one statement from each pair (either A or B) depending on which most accurately describes how you approached performing the tasks that we assigned to you today.

1.	A. Each round, I tried my best.	B. Each round, I put effort toward creating a specific number of words.
2.	A. I consistently tried my hardest each round.	B. I pushed myself to write a specific number of words each round.
3.	A. Each round, I aimed to do my very best.	B. Each round, I tried to write a specific number of valid words.

2. If you picked option B above at any point, then please answer the following:
   a. What is the specific number of valid words that you focused on creating each round? _____
   b. What is the specific number of valid words that you would have to have created each round to be satisfied with your productivity? _____
   c. What is the specific number of valid words that you focused on creating each round to be satisfied with your productivity? _____

3. Please respond using the scale provided.

1	2	3	4	5
Not at all	Slightly	Moderately	Quite a bit	Extremely

   a. ____ Throughout the trials, how committed were you to the goal that we assigned?
   b. ____ Throughout the trials, to what extent did you care about meeting the goal that we assigned?
   c. ____ Throughout the trials, how dedicated were you to the goal that we assigned?
   d. ____ Throughout the trials, to what extent did you choose to be committed to the goal that we assigned to you?

4. Please check the box corresponding to your level of agreement for each item below.

SD = Strongly Disagree, D = Disagree, N = Neutral, A = Agree, SA = Strongly Agree

	SD	D	N	A	SA
The below three statements pertain to the anagrams (e.g., BNMOETR) that you were asked to complete and the productivity level that you reported in the Productivity Report.					
1. When I reported my productivity as creating 8 or fewer words in the productivity report, I felt bad.					
2. When I reported my productivity as hitting or exceeding 9 or more words in the productivity report, I felt good.					
3. I felt neither good nor bad about how my productivity was reported relative to the target.					
4. It is possible for someone to deliberately overstate their productivity in the productivity report.					
5. There are no consequences for deliberately overstating one's productivity in the productivity report.					
6. Overstating one's productivity in this study would be considered dishonest.					
7. I paid full attention while answering all questions in this study.					

5. Is there any reason why we should not use your data? You will still receive your compensation regardless of how you respond. [open-ended]

_____

_____

_____

_____

253. CWJQYTV

Modification to ITEM 2 on the application form (see also Appendix B): Revised demographic measurements. Colleagues in the initiative have asked for a broader set of demographic measurements. They are presented on the following page.

Please note that item 6 in the demographic survey is only to be used at sites that do not have an English-speaking population (e.g., India, China). Sites in America and Europe will not include these items unless it is necessary.

DEMOGRAPHICS

As a friendly reminder, you are free to skip any questions that you wish. Your responses to these questions will not be used to identify you. We only ask them to study demographic trends.

1. What is your age? _____

2. What is your gender?
   A. Woman
   B. Man
   C. I identify my gender as: _____ (please specify)

3. Ethnic origin refers to the ethnic or cultural origins of one's ancestors. An ancestor is usually more distant than a grandparent. Please select the option(s) that best describe your ethnic origin:
   A. North American origins (Indigenous, First Nations, Inuit, Metis, and others)
   B. European origins
   C. Caribbean origins
   D. Latin, Central and/or South American origins
   E. African origins
   F. Asian origins
   G. Oceanian origins
   H. Prefer to specify _____

4. Is your first language English?
   A. Yes
   B. No

5. How many years have you spoken English? _____

6. Please select the response option that describes your proficiency in speaking English?

A. Proficient	Understands almost everything effortlessly, summarize complex information from multiple sources, and communicates themselves with precision, fluency, even in nuanced or complex situations.
B. Advanced	Understands demanding texts and implicit meanings, express themselves fluently with minimal effort, and use language effectively in social, academic, and professional settings, producing clear, well-structured texts on wide subjects.
C. Upper Intermediate	Understands main ideas of complex texts and interacts fluently, producing clear, detailed texts on various topics.
D. Intermediate	Understands key points of familiar topics and handles common situations, expressing simple ideas and personal opinions.
E. Pre Intermediate	Understands basic phrases and communicates in routine tasks on familiar topics with simple descriptions.
F. Beginner/Elementary	Understands and uses basic phrases for everyday needs, communicating simply if the other person speaks slowly.

7. What is your major? _____

8. What is your study level?
   A. Bachelors Degree
   B. Masters Degree
   C. Other: _____

Modification to ITEM 2 paragraph 3. We will have 4 experimental groups (not 3). The new experimental group is termed a 'personal goal' group that contains the 'mere goal' instructions but excludes the reference to "prior students". The specific text is below:

[MERE GOAL]

It is important that you commit to a specific yet attainable goal. *YOUR GOAL IS TO CREATE 9 VALID WORDS* during the allotted 1 minute using these seven letters. This goal is difficult, but realistic. In previous studies many students were able to create 9 or more words per round using the same groups of letters you are about to see.

[PERSONAL GOAL]

It is important that you commit to a specific yet attainable goal. *YOUR GOAL IS TO CREATE 9 VALID WORDS* during the allotted 1 minute using these seven letters. This goal is difficult, but realistic.

The reason for this condition is to eliminate a confound – social facilitation.

Modification to ITEM 2 on the application form: Revision to task 8. Participants will be informed that this round involves testing a new anagram. This is the unique anagram that allows us to identify whether or not someone overstates their performance. We made this change because we learned that this was part of the original study protocols. The revised Task 8 is on the next page.

Revised Trial 8

Round #8

Goal: _____

(Experimental Trial)

XXXXXXX

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

Modification to ITEM 2 on the application form: Initial Debriefing. To minimize the threat of diffusion of treatment (i.e., participants sharing our manipulations with other students), we will debrief students twice: once immediately after completing our lab study and then again after all data has been collected. The initial debriefing statement is below.

Debriefing for Pilot

We appreciate your participation in our study and thank you for spending the time helping us with our research. Your participation in our study helps us to ensure that our procedures are working as we intend. We will provide you with a detailed summary of the findings from our main study once all data collection has been completed.

Thank you very much for your assistance. We sincerely hope you enjoyed participating in this study.

PLEASE DO NOT DISCUSS THIS STUDY WITH ANYONE ELSE.
Doing so would compromise its scientific integrity.

Debriefing for Main

We appreciate your participation in our study and thank you for spending the time helping us with our research. We will provide you with a detailed summary of the findings from our main study once all data collection has been completed.

Thank you very much for your assistance. We sincerely hope you enjoyed participating in this study.

PLEASE DO NOT DISCUSS THIS STUDY WITH ANYONE ELSE.
Doing so would compromise its scientific integrity.

Modification for ITEM 2: Experimenter Script. We have created a script that experimenters will follow. It requires the use of a set of slides, which we've shared with the IRB Chair Dr. Alaina Daigle. See the next page.

Experimenter Script

Experimenters are expected to read the content in **red**.

Administrative note for Nicholls: At Nicholls State University, we will be sampling students from BSAD 101 (i.e., Powell 140), which is a large undergraduate classroom setting ($n \sim 80$). At the beginning of the class session, students will be asked to visit Google's random number generator and sample a number between 1 and 1000. They will then be asked to get in line from lowest to highest. As they enter the classroom, a graduate assistant will assign each student to a seat in a seating chart. This chart is intended to give people privacy while they work. Students will be given an informed consent form upon being seated and asked to read and sign it if they wish to participate in our study. This will be picked up before the experiment begins. Students who elect not to participate will be asked to wait for an instructor to meet with them. The instructor will notify these students that there are no penalties for not participating and the student may leave if they wish.

[Once everyone is seated and ready to begin]

Welcome and thank you for participating in our decision-making study. As a reminder, your participation in this decision-making study is strictly voluntary. Any data from your performance in this setting will be held anonymously. You do not have to answer any specific question or questions if you like and you may terminate your participation in our study at any time without penalty. We will ask you to report demographics but this will not be used to identify you. We only gather it to study demographic trends. **Finally, do not put your name or any other identifying information on any workbooks or answer sheets throughout the study.** Please take your time as you go through the decision making study. Read all instructions very carefully and refrain from talking with or disrupting others for the entire duration of the study.

Please open the WORKBOOK in the folder pocket to the left. Open it and complete the first page with the blue pen. This first page requires you to create your participant ID. You may use your phone to retrieve your ID. Afterward, please set your phone to silent and put it away so as not to disturb you during the trial. Look to me when you have completed this page.

[After everyone looks to you, advance to the second slide]

As a reminder, please complete this portion of the experiment with your blue pen. Now, turn to the next page to receive your instructions for the practice round of this experiment. We will have two practice rounds. I'm going to give you one minute to create as many words as you can from an anagram that I've assigned to you. The rules for creating words are in your booklet. They are:

1. Each word must be at least two letters long.
2. No proper nouns (e.g., Larry, Mexico, Boston Red Sox).
3. Use each of the 7 letters only once per word.
4. Words can only be used in one form.

Create as many words as you can in the one minute time limit. After the first one-minute time limit has expired, please turn your page and work on the next anagram.

Does anyone have any questions?

[Move to the next slide]

Please 'nod' if you are ready to begin.

[After everyone nods in agreement]

Now that you are familiar with the task, **I am assigning you a goal**. **It is important that you commit to this goal.** Please read your materials closely and then look to me when you are ready to begin.

[Press play on the slides – After the slide show has ended]

Please pass your blue pen to me.

[Take pens and advance to the next slide]

For this portion of the experiment, use the **black pen** that we've assigned to you.

[Advance to the next slide]

Please pull out the Productivity Report in the folder pocket to the right. **As a reminder, please do not put your name or any other identifying information on any workbooks or answer sheets.**

For this portion of the experiment, I will ask you to check your work on the main trials. Please cross out any invalid words. Afterward, you will need to complete this productivity report indicating whether or not you produced a specific number of valid words. Once this report is completed, please place it into the envelope and seal it. After that, complete the follow-up survey also located in your folder.

Your workbooks and folder containing your follow-up survey will go into the box to your right. The sealed envelope will go into the box to your right.

I'm now going to leave the room to give you privacy to finish this portion of our study. Please do not disturb your peers as you complete this portion of the task.

[Leave the room and don't look into the room – give participants privacy. Get ready to share the debriefing form when students leave the study.]

Modification to ITEM 3 on the application form: site-specific counseling resources are required. The current application requires Nicholls Counseling Center to provide support if needed for our applicants. Each site contributing to this study must provide access to an analogous counseling service for their participants. We do not anticipate students pursuing counseling services for their time in our study.

Specifically, paragraph 3 of Appendix D in the "Debriefing Materials" will need to be revised in a site-specific manner. Below is the material for Nicholls, but obviously it will have to change for each site contributing to this study:

"We also encourage you to contact the Counseling Center at Nicholls State University (https://www.nicholls.edu/counseling/) if you experience any adverse effects based on your participation in this study. You can also call (985) 448-4080."

Modification to ITEM 4B on the application form: Allowing sites to include a personality test that assesses the following if desired: (i) six broad dimensions of personality defined by the HEXACO model (see hexaco.org), (ii) moral identity, and (iii) need for achievement. However, only the data from the honesty-humility dimension of the HEXACO will be pooled across sites. We would like to assess student personality traits using the HEXACO-60 item inventory (all items are available on the subsequent pages). We will link students data from the personality test to the data emerging from the lab study using the ID generator available from this link (see https://chriscastille6.github.io/CANDIDATE-ID-GENERATOR/).

Also, not all participating institutions require this tool. Specifically, several institutions have a participant pool management system (e.g., Sona Systems) that provides essentially the same functionality. Students have participant IDs that are retrieved using their full name, however at no point are these IDs linked to specific students in the data gathering processes. In other words, all data is still gathered anonymously and held confidentially.

The hypothesis that we are testing with this addition is, broadly speaking, that *Honesty-Humility (a core dimension of personality assessed in our inventory) predicts unethical behavior emerging in the lab study.* There is a wealth of evidence that individuals who are low in honesty-humility are tempted into cheating, particularly when there is an award attached to goal attainment.

All additional personality measurements are available in Appendix A. Note that measurements beyond the HEXACO-60 item inventory are included. These are included as some of our collaborators have asked us to include these measures. They are measures of moral identity (another well-established predictor of unethical behavior) and need for achievement. We do not have any specific hypotheses about the need for achievement.

The items corresponding to Honesty-Humility and its facets (e.g., Sincerity) are below:

1. Sincerity 6, 30R, 54
2. Fairness 12R, 36, 60R
3. Greed-Avoidance 18, 42R
4. Modesty 24R, 48R

The data for these items will be pooled across sites. Data for the other measures will be optionally pooled.

Lastly, we do not know if this feature (asking participants to generate a unique ID) will harm our ability to observe unethical behavior. In our pilot study, we may exclude this feature from some packets to see if our goal manipulations cause unethical behavior when people feel genuinely anonymous.

The full inventory is on the following page.

Personality Measurements (HEXACO, Moral Identity, Need for Achievement)

Directions: On the following pages you will find a series of statements about you. Please read each statement and decide how much you agree or disagree with that statement. Then write your response in the space next to the statement using the following scale:

5 = strongly agree
4 = agree
3 = neutral (neither agree nor disagree)
2 = disagree
1 = strongly disagree

Please answer every statement, even if you are not completely sure of your response.

1 ____ I would be quite bored by a visit to an art gallery.

2 ____ I plan ahead and organize things, to avoid scrambling at the last minute.

3 ____ I rarely hold a grudge, even against people who have badly wronged me.

4 ____ I feel reasonably satisfied with myself overall.

5 ____ I would feel afraid if I had to travel in bad weather conditions.

6 ____ I wouldn't use flattery to get a raise or promotion at work, even if I thought it would succeed.

7 ____ I'm interested in learning about the history and politics of other countries.

8 ____ I often push myself very hard when trying to achieve a goal.

9 ____ People sometimes tell me that I am too critical of others.

10 ____ I rarely express my opinions in group meetings.

11 ____ I sometimes can't help worrying about little things.

12 ____ If I knew that I could never get caught, I would be willing to steal a million dollars.

13 ____ I would enjoy creating a work of art, such as a novel, a song, or a painting.

14 ____ When working on something, I don't pay much attention to small details.

15 ____ People sometimes tell me that I'm too stubborn.

16 ____ I prefer jobs that involve active social interaction to those that involve working alone.

17 ____ When I suffer from a painful experience, I need someone to make me feel comfortable.

18 ____ Having a lot of money is not especially important to me.

19 ____ I think that paying attention to radical ideas is a waste of time.

20 ____ I make decisions based on the feeling of the moment rather than on careful thought.

21 ____ People think of me as someone who has a quick temper.

22 ____ On most days, I feel cheerful and optimistic.

23 ____ I feel like crying when I see other people crying.

24 ____ I think that I am entitled to more respect than the average person is.

25 ____ If I had the opportunity, I would like to attend a classical music concert.

26 ____ When working, I sometimes have difficulties due to being disorganized.

27 ____ My attitude toward people who have treated me badly is “forgive and forget”.

28 ____ I feel that I am an unpopular person.

29 ____ When it comes to physical danger, I am very fearful.

30 ____ If I want something from someone, I will laugh at that person's worst jokes.

31 ____ I’ve never really enjoyed looking through an encyclopedia.

32 ____ I do only the minimum amount of work needed to get by.

33 ____ I tend to be lenient in judging other people.

34 ____ In social situations, I’m usually the one who makes the first move.

35 ____ I worry a lot less than most people do.

36 ____ I would never accept a bribe, even if it were very large.

37 ____ People have often told me that I have a good imagination.

38 ____ I always try to be accurate in my work, even at the expense of time.

39 ____ I am usually quite flexible in my opinions when people disagree with me.

40 ____ The first thing that I always do in a new place is to make friends.

41 ____ I can handle difficult situations without needing emotional support from anyone else.

42 ____ I would get a lot of pleasure from owning expensive luxury goods.

43 ____ I like people who have unconventional views.

44 ____ I make a lot of mistakes because I don’t think before I act.

45 ____ Most people tend to get angry more quickly than I do.

46 ____ Most people are more upbeat and dynamic than I generally am.

47 ____ I feel strong emotions when someone close to me is going away for a long time.

48 ____ I want people to know that I am an important person of high status.

49 ____ I don’t think of myself as the artistic or creative type.

50 ____ People often call me a perfectionist.

51 ____ Even when people make a lot of mistakes, I rarely say anything negative.

52 ____ I sometimes feel that I am a worthless person.

53 ____ Even in an emergency I wouldn't feel like panicking.

54 ____ I wouldn't pretend to like someone just to get that person to do favors for me.

55 ____ I find it boring to discuss philosophy.

56 ____ I prefer to do whatever comes to mind, rather than stick to a plan.

57 ____ When people tell me that I'm wrong, my first reaction is to argue with them.

58 ____ When I'm in a group of people, I'm often the one who speaks on behalf of the group.

59 ____ I remain unemotional even in situations where most people get very sentimental.

60 ____ I'd be tempted to use counterfeit money, if I were sure I could get away with it.

Moral Identity Measurement

Directions: Listed below are some characteristics that may describe a person [list of nine traits]. The person with these characteristics could be you or it could be someone else. For a moment, visualize in your mind the kind of person who has these characteristics. Imagine how that person would think, feel, and act. When you have a clear image of what this person would be like, answer the following questions on a scale of 1 = strongly disagree, to 5 = strongly agree.

List of traits:

Caring
Compassionate
Fair
Friendly
Generous
Helpful
Hardworking
Honest
Kind

Response scale:

5 = strongly agree
4 = agree
3 = neutral (neither agree nor disagree)
2 = disagree
1 = strongly disagree

Items:

1. It would make me feel good to be a person who has these characteristics.
2. Being someone who has these characteristics is an important part of who I am.
3. I would be ashamed to be a person who has these characteristics. (R)
4. Having these characteristics is not really important to me. (R)
5. I strongly desire to have these characteristics.
6. I often wear clothes that identify me as having these characteristics.
7. The types of things I do in my spare time (e.g., hobbies) clearly identify me as having these characteristics.
8. The kinds of books and magazines that I read identify me as having these characteristics.
9. The fact that I have these characteristics is communicated to others by my membership in certain organizations.
10. I am actively involved in activities that communicate to others that I have these characteristics.

Need for Achievement Measure

Please read the statements below and indicate your agreement with each statement using the scale provided.

Response scale:

5 = strongly agree
4 = agree
3 = neutral (neither agree nor disagree)
2 = disagree
1 = strongly disagree

1) I enjoy accomplishing difficult (but feasible) goals at work.
2) I strive to gain added responsibilities in my job.
3) I enjoy working toward clear, challenging goals.
4) I feel it is important to persist through difficult times at work.

Modification to ITEM 6a on the application form: Marketing the study with a more informative flier (Appendix F in the original submission). We would like to find an appropriate way to market our study with a flier. The initial flier did not mention any monetary compensation. However, there will be the opportunity to receive up to $14 dollars and this is marketed appropriately. See the next page.

Appendix F from original submission – Marketing (revised)
A Study in Decision Making

You are invited to participate in a research study ("Examining Decision Making"). This study has received ethics clearance from the Institutional Review Board at Nicholls State University. The study is being conducted by [**insert your name**].

All students at [**insert school name**] are eligible to participate. If you agree to participate in this study, **please bring your cell phone.** You will be asked to complete a decision making task at a time that is assigned to you. You will also be asked to complete a series of measures related to your personality, attitudes, and feelings as well as some demographics. This will take approximately 1 hour to complete. **[Sites have discretion to discuss bonus, course credit, or cash incentives]**

Approximately **[x-y]** students at [**insert school name**] will be asked to complete the pilot study. You will not be asked to identify yourself and the information will be anonymous. To protect your anonymity, you will not be asked to provide your name, email address, or other potentially identifying information.

You may contact [**insert your name**] if you have any questions or concerns about this study.

Modification to ITEM 6b on the application form: Allowing sites to recruit participants using course credit or bonus points. Specifically, instructors at contributing institutions may be given a flier for our study and asked the following:

"Would you be willing to grant students the opportunity to participate in our study for bonus points or course credit[1]?"

Also, the instructors will be told the following:

"Please have an alternative assignment available in the event that the student backs out of our study. We do not expect this to happen or to happen infrequently."

In terms of granting bonus points or course credit for completing each part of the study, we will do the following. After completing the initial personality test, students will be brought to a separate survey where they provide their (i) last name only, (ii) email address, and (iii) course for which they want credit, and (iv) instructor name. This information will be gathered again after students consent to participate in the lab study via a separate survey. Although this identifying information is gathered, it is only used to help students receive course credit and/or bonus and will not be tied in any way to the data gathered in the personality test or lab study.

As this revision requires the consent form to be modified, we included the updated consent form on the following. The key detail is highlighted.

[1] Some institutions allow course credit to be earned by participating in experiments.

Informed Consent Form for a Study in Decision-Making

Purpose of the Study

You are invited to participate in a research study conducted by researchers from the Department of Management and Marketing at Nicholls State University. The purpose of this study is to understand decision-making in work settings. Multiple researchers with different interests and focuses are contributing to a broader understanding of how individuals make decisions. Researchers from **[local university name]** are gathering data and the researchers on-site are **[insert names from local institution]**. A small grant from Nicholls State University was used to fund this research.

What will you do in this study?

In this study, you will work on a decision making task. You will also be asked to fill out surveys that measure your attitudes about the task and basic demographic information. You will be able to skip any question or task that makes you feel uncomfortable. Participation in this study will take a total of 1 hour. We cannot reveal all the elements involved in this study right now because doing so may influence how you will respond. However, we will reveal to you all elements of the study once the data collection is complete.

Risks

The research requires you to complete a decision making task. There is a possibility that this task may be mildly upsetting but no more than what you would experience in everyday life. If you find that you are upset by the task posed in this research, please stop immediately. In case you feel you need additional support, there are resources available. This stress is not expected to last beyond the end of the study session. However, psychological support is available if needed. See **[insert counseling support services]**.

Benefits

The researchers cannot guarantee any direct benefits from participation. However, an important contribution of scientific research into organizational behavior is to provide organizations, managers, and employees with data so they can better understand how business and social practices influence employee behavior. In this study, you will be helping us understand the factors that determine employees' decision making and how managers can influence employees' behavior.

Remuneration

You may receive compensation in the form of a small bonus point(s) or course credit depending on your instructor's approval.[2]

---

[2] In the main study, we will inform students that a "small cash award" is available for participating. However, this will not be part of the pilot study.

Confidentiality of Your Information
Approximately **[x-y]** students from **[insert your school name]** will be asked to complete this pilot study. Your anonymity is crucial to the success of this study. Please do not put any identifying information on your materials. We do not wish to gather any names or have any of your identifying information associated with any of the data that is collected. All data collected will be anonymous. No information that would potentially identify a participant or organization will be used in the analyses and/or results. Furthermore, because the interest of this study is in the average responses of the entire group of participants, you will not be identified individually in any way in any written reports of this research. Any raw data will be kept for a period of at least 7 years following publication of the research. The data will be stored on secure **[insert your school name]** servers or, as needed, on encrypted external drives and only researchers associated with this study have access. De-identified data related to your participation may be submitted to an online repository and/or journal (i.e., the data may be publicly available). These data will be completely anonymized prior to submission and will be presented in aggregate form in publications. This process is integral to the research process as it allows other researchers to verify results and avoid duplicating research. Though the data is posted for the purpose listed, other individuals may access these data by accessing the open access repository. Although the dataset without identifiers may be shared publicly, your identity will always remain confidential. Should you not wish to submit your data in this manner, please do not select this study.

Contact
This project has been reviewed and received clearance from the Institutional Review Board at Nicholls State University IRB 2024-07-30-001 CBA. If you feel you have not been treated according to the descriptions in this form or your rights as a participant in research have been violated during the course of this project, you may contact the Nicholls State University Institutional Review Board. If you have questions at any time about the study or the procedures, you may contact the researchers by emailing **[insert your name]** at **[insert your email address]**. However, you should be aware that if you email the researchers from a personal email address, your identity may become known.

Participation
Your participation in this study is voluntary. If you decide to participate, you may withdraw from the study at any time without penalty and without loss of benefits to which you are otherwise entitled. If you withdraw from the study before data collection is completed, you will receive your compensation. Please notify the team that you have withdrawn from the study and your data will be destroyed. You have the right to skip any question(s)/procedure(s) you choose. Note that a withdrawal from the study will not

affect participants' relationship with the researchers or **[insert your university]** as well as Nicholls State University.

Feedback and Publication

The results of the study will be submitted to peer-reviewed academic journals for publication consideration and/or be presented at a conference. If you would like a copy of the results, please make this request to the local research team **[insert local PI]**.

CONSENT

You are making a decision whether to participate in this study. Your signature below indicates that you have read this form (or the form was read to you) and that all questions have been answered to your satisfaction. By signing this consent form, you are not waiving any of your legal rights as a research participant. A copy of this consent form will be provided to you.

I agree to participate in this study.

_____	_____	_____
Name of Adult Participant	**Signature of Adult Participant**	**Date**

_____

Email Address

Modification to ITEM 7a1. We mistakenly believed that $16 was the maximum that could be won by a participant. However, after conversing with one of the original study authors (Lisa Ordóñez), we learned that $14 was the actual highest amount that could be won. Students in the main study will not be paid for completing the experimental anagram.

Modification ITEM 7c2. Originally, the protocols stated that participants would incur a cost of $10. However, this is actually the benefit they receive. There will be no monetary costs for participation.
