MNGT 425 — Exhibits A–C consent

Exhibits A–C — Technical supplement & de-identified course data (teaching portfolio / research)

This PDF is an information copy only. Your choice is not recorded until you complete and submit the official web form on PRAMS/HSIRB.

Consent text

Reference document: Exhibits A–C: Technical Supplement for the MNGT 425 HR Analytics Teaching Portfolio (professorship materials). This form summarizes that supplement and the underlying course data it draws on. Informed consent to use de-identified course data for research and teaching documentation
Faculty / researcher: Christopher Castille, Management and Marketing Course: MNGT 425 (HR Analytics), Nicholls State University

1. What you are being asked to do You may voluntarily agree to let the instructor use de-identified information from this course for (a) scholarly and teaching documentation, including materials related to the Exhibits A–C technical supplement (e.g. professorship or teaching portfolio), and (b) optional follow-on analyses to improve those materials, before they are finalized. If you do not agree, there is no penalty, and you do not need to do anything else.
2. What the Exhibits A–C supplement is The supplement describes three in-class / Canvas activities in MNGT 425, each compared to published benchmarks: Exhibit A — perceived effectiveness of selection procedures and related team decisions (e.g. hiring “battery” choices) versus Terpstra (1996) as summarized in Highhouse (2008); Exhibit B — ten true/false “selection myths” items versus Fisher et al. (2021); Exhibit C — six true/false items on interpreting p-values (Haller & Krauss, 2002) versus reference rates in Gigerenzer (2004). The full supplement explains methods, small class sample sizes, and limitations.
3. What data this consent covers (both the report and the raw inputs) This consent covers the same classes of data described in that supplement, namely: numeric ratings and scores (e.g. 1–5 effectiveness ratings, counts of which procedures teams selected, percentages correct on true/false items, “all items correct” indicators); Canvas survey exports and similar class survey responses; and aggregated or de-identified tables and figures produced from them. Free-text responses, names, and other direct identifiers are not used in any shared report or public-facing visual; any visuals or examples shared in research or portfolio materials are anonymous (no names or other elements that would reasonably identify you). If a particular assignment includes identifiable text you believe could be recognisable even when quoted briefly, the instructor will not use that text in public materials without separate permission.
4. Blinded review and course standing The instructor will not review whether you consented, or your individual responses for this purpose, until after final course grades have been submitted to the Registrar. Your choice to opt in or out, and your responses used under this consent, will not affect your grade, standing in this course, or standing in any other course, and you will not be rewarded with extra points for participating.

5. **Withdrawing and deletion** If you change your mind after consenting, you may withdraw this permission or request that your de-identified row be excluded from future uses that have not yet been published, by contacting Dr. Alaina Daigle, Chair of the Committee, 168 Ayo Hall at alania.daigle@nicholls.edu.

6. **Signature and record-keeping (for IRB / university review)** Below you will enter your legal first and last name (matching university records where possible), your Nicholls email, and submit either I consent or I do not consent. Typing your name constitutes your electronic signature. The instructor maintains a confidential list that shows each student's decision for audit purposes; choosing not to consent is honored and does not affect your grade.

Document generated from the Participant Recruitment & Management System (PRAMS / HSIRB). Questions: contact your course instructor.
